FORD: 1998-2001 RANGER

ISSUE

When working around High Voltage circuits such as on an Electric Ranger E.V., High Voltage Insulated Safety Gloves must be worn. The gloves specified for the Ranger E.V. are Class "O" rubber gloves. These gloves are designed for working around equipment rated up to 1,000 volts. The gloves must be tested prior to each use and re-certified every 6 months.

ACTION

Before putting on and using the High Voltage Safety Gloves they must be inspected. Inspect the gloves by rolling the cuff up on the open end and making sure that they retain air pressure with no leaks. Even a pinhole leak is enough to allow current to pass through. Refer to the following information to order new High Voltage Safety Gloves.

SERVICE INFORMATION

If the gloves show any sign of wear and tear, the gloves must NOT be used. Replacement gloves can be ordered from "Reed City Power Line Supply" the phone number is 800-832-2297 or (231-832-2297). To get a set of gloves re-certified call the same number and request a Return Authorization form.

CAUTION

PROTECTIVE LEATHER OUTER GLOVES MUST ALWAYS BE WORN OVER THE HIGH VOLTAGE INSULATED SAFETY GLOVES. CHEMICALS CAN BREAK DOWN THE RUBBER OF THE GLOVES. NEVER WASH THEM WITH CHEMICALS OR USE THEM FOR WASHING PARTS. NEVER USE THE PROTECTIVE LEATHER GLOVES WITHOUT THE RUBBER HIGH VOLTAGE SAFETY GLOVES. REPLACEMENT GLOVES MUST MEET ALL AMERICAN SAFETY TESTING MATERIAL STANDARDS.
