TRANSAXLE—MTX-75—NEW TRANSAXLE FLUID—SERVICE TIP	Article No. 00-1-9

FORD: 1995-2000 CONTOUR

MERCURY: 1995-2000 COUGAR, MYSTIQUE

ISSUE

Several internal changes have been implemented on the MTX-75 transaxle to improve shift efforts. These changes have resulted in the need for a new synthetic transmission fluid for ALL service operations.

ACTION

Use only the new fluid when performing any service on Cougars and Contour/Mystiques built after January 1, 2000. Refer to the following text for additional details.

A new synthetic fluid is required when topping off the fluid level or whenever the transmission is being repaired or replaced in service in vehicles built after January 1, 2000. This new fluid (XT-M5-QS (1 L/quart)) can easily be identified by its “honey” color as opposed to the reddish fluid used previously.

The new synthetic fluid (XT-M5-QS (1 L/quart)) is fully compatible with earlier (1995-2000 model year) transaxles and fluid. It is recommended that this new synthetic fluid (XT-M5-QS (1 L/quart)) be used exclusively in all model year MTX-75 transaxles when filling a fully drained unit, or when topping off a low fluid level.

PART NUMBER	PART NAME
XT-M5-QS	Transaxle Fluid (1 L/Quart)
